### **Abstract**

© 2016 E. Schweizerbart'sche Verlagsbuchhandlung, Stuttgart, Germany. Jurassic representatives of the Early Mesozoic actinopterygian family Saurichthyidae are usually placed into one genus at the exclusion of all earlier saurichthyids. Until recently, it remained unclear whether *Acidorhynchus* STENSIÖ, 1925 or *Saurorhynchus* REIS, 1892 (non MÜNSTER, 1840) should be used to denominate this probably monophyletic group of species. A review of the original literature and the International Code of Zoological Nomenclature provides justification for the priority of *Saurorhynchus* REIS, 1892, which has already been adopted in most recent publications.
